

CONTROL BAR

INTRODUCING THE 2011 CONTROL BAR

For 2011 CAUTION took our proven high performance control bar and added some additional features for increased durability and functionality. We started by adding a stainless insert to increase trim line longevity and eliminate insert wear. We changed the internals of the quick release to allow the red safety depower line to run through the center of the quick release, making the bar cleaner and more functional. We added two inches of increased throw for those who prefer it, otherwise riders can adjust throw length to meet their preferences.

Adjustable bar ends allow riders to change the effective length of the bar so that one bar fits all kite sizes. The new spectra trim line offers an on-the-fly stopper ball to prevent hand fatigue on long tacks, and imitates C-kite power for old school freestyle tricks. Our spring activated quick release offers a clean release with uniform resistance every time. Designed with a spinable base and a center positioned push away quick release handle, it offers increased safety and easy access from any direction.

FEATURES

- Spectra throw line with on-the-fly cruise control ball
- Ergonomic throw length with easy length adjustment
- Redesigned OS system with no friction points
- New one piece spring tensioned Quick-Fire Safety Release
- Spinnable base allows for unwinding twists
- Quick Release centered and accessible from all angles
- Trim loop designed with unhooked riders in mind
- 24 Meter Dyneema color coded premium flying lines
- Three power adjustment knots on center and steering lines
- Two options for safely depowering the kite

PERFORMANCE

- 4 line simplicity
- Smooth / low friction
- Precision control
- Above bar sheeting
- One piece trim loop
- Adjustable bar ends
- Speed control stopper
- Adjustable outside lines
- Spring tensioned QR
