

INTRODUCING THE ALL NEW 2011 SPITFIRE

Blazing fast, super stable, the ultimate in precision flying characteristics - this is the 2011 SPITFIRE. The last four years of Caution research & development has led to a single kite that balances the line between blistering performance and user friendly precision flying; the 2011 SPITFIRE is the ultimate tool in tearing apart A-frame waves, boosting big air and is guaranteed to dominate everything in between.

The focus for 2011 was to start with the Zombie's design platform and build upon strengths, such as stability and predictable power control, while pushing the boundaries of higher performance steering and speed. The Spitfire boasts a slight reduction in bar pressure, offering the perfect cross between sheeting comfort for long sessions while still delivering Caution's acclaimed precision-response and solid positional feedback. New wingtip geometry results in quicker water relaunches and crisp steering response. Each kite was dialed for impressive overall range with a new optimized sizing spread and a sizing shift to reflect recent shifts in industry sizing trends.

The 2011 SPITFIRE is the kite we've been waiting for; the dependability required by the progressing novice and the performance our team riders demand.

FEATURING

- Precision steering characteristics
- Reduced bar pressure for overall ballance and feel
- Short bridles and optional rear line traveling attachment point
- Caution's durable Single Inflation System
- Super stable flying characteristics and predictable power delivery
- Expansive range and broad optimized sheeting range
- Tapered struts for efficient release

DURABILITY AND MATERIALS

- Quality materials from industry leaders: Teijin, DP and Cousins
- Caution's rigorously tested and proven bullet proof construction
- Glued and triple stitched seam technology
- Double ply trailing edge
- Low stretch panel layout
- Spectra bridals for decreased wear and longevity

Sizing M²: 5, 7, 9, 11, 13, 16
